

AUTOMATED TRADING INTELLIGENCE

THOR

Trading Intelligence for eToro

Discipline for stocks. Instinct for crypto. Built to run while you don't.

THOR is a self-hosted trading assistant that watches your eToro watchlist around the clock and acts on a strategy you define — the same way, every cycle, without hesitation or second-guessing. It blends rule-based technical scoring with an AI-assisted second opinion on the hard calls, so decisions stay consistent even when the market isn't.

2

ASSET CLASSES

Equities & crypto in one engine

DRY-RUN

SAFE START

Every install simulates first

LIVE

FULL VISIBILITY

Every decision, reasoned & logged

EVERY CYCLE

Scan watchlist → score trend, momentum & volume → weigh risk limits → act, hold, or ask for a second opinion → log every reason to the dashboard.

Built to trade like you would — if you never got tired, scared, or greedy.

Always-on market scanning

Trend, momentum, volume and relative-strength scoring runs on a fixed schedule, day and night, across your whole watchlist.

One engine, two asset classes

A dedicated crypto scanner — BTC-gated, trend & volume aware — runs alongside the equities engine, so both follow rules, not mood.

AI-assisted judgment calls

An AI layer reviews borderline exits as a second opinion on top of hard-coded signals — it advises, it doesn't override your rules.

Risk guardrails, not willpower

Trailing ATR stops, portfolio drawdown limits and loss-cooldowns step in automatically to contain a bad run before it compounds.

Full visibility, no black box

A live dashboard shows every position, every decision and the reasoning behind it — plus the complete trade history.

Configurable, not fixed

Thresholds, budgets, watchlists and safety limits live in a plain config file you own and control.

SECURITY & TRUST

THOR runs on infrastructure you control, so security starts with what it doesn't do: it never stores your eToro password in plain text, and it never places a trade without your configured rules approving it first.

✓ Encrypted credentials

Your eToro password is encrypted at rest with a secret key you generate — never written to disk in plain text.

✓ Gated dashboard access

The control panel sits behind a password-protected session. No login, no view, no control.

✓ Safe by default

New installs launch in dry-run mode, so you can watch THOR decide before it spends a cent.

✓ Automatic circuit breakers

Drawdown stops, max-loss limits and cooldown windows are enforced in code, not left to willpower.

✓ You stay in control

Every trade goes through eToro's own official API using your account — THOR is an assistant, not a custodian of your funds.

Self-hosted. Fully configurable. Your rules, running non-stop.
